*Entry Type 06:

- The cargo release entry type 06 has been disabled for testing in the ACE Certification environment. CBP is working to add a new conditional record, SE41, to the final data set structure of entry type 06, and will be moving three data elements from the SE60 record to the new SE41 record.

**Entry Summary Type 06

- The entry type 06, entry summary has been disabled for testing in the Certification environment because a new data element will be added to the 41-Record of the AE record identifier for ACE Entry Summary.
- Certify for ACE Cargo Release from ACE Entry Summary for entry type 06 has been disabled for testing in the Certification environment because new internal mapping needs to be coded for this functionality to work as designed.

***Remote Location Filing (RLF)

- RLF of ACE Entry Summary and ACE Cargo Release is functionally working in the Certification environment. However, Legacy RLF policy requires filers to always certify from entry summary, even for a “Replace” transaction, thus preventing the trade from making corrections to the cargo release filing, and resulting with the filer having to cancel the existing RLF transaction and transmit a new RLF entry.
